PROFESSIONAL SUMMARY

Full stack developer with 3+ years of production experience building web applications, RESTful APIs and multi-tenant SaaS platforms in PHP/Laravel and Node.js on MySQL, PostgreSQL and MongoDB. Currently on-site at Speed Track in Makkah, where I built the WashTrack car wash platform and its customer app APIs end to end: membership and subscription billing, loyalty and campaign engines, role-based admin panels, and payment, WhatsApp and real-time notification integrations.

I also bridge software and hardware. I program the Delta PLC and HMI for our automatic car wash machine (Speed S3) and connect it to a cloud telemetry server for remote control and fault diagnosis. I own systems from requirements through deployment and production support, and I work in English with international teams.

TECHNICAL SKILLS

- **Backend:** PHP 8 (Laravel), Node.js (Express, TypeScript), Python (FastAPI); RESTful API design and versioning, service-oriented and multi-tenant SaaS architecture
- **Databases:** MySQL/MariaDB, PostgreSQL, MongoDB, Redis; schema design, indexing, query optimisation, double-entry ledger design
- **Frontend & admin panels:** React (Vite, TypeScript), Bootstrap 5, Tailwind, jQuery, Chart.js/ApexCharts dashboards
- **Mobile:** REST APIs and real-time back ends for mobile clients; currently extending into Flutter
- **Integrations:** payment gateways (Stripe, JazzCash, Easypaisa), SMS/OTP verification, WhatsApp (Green API) messaging and AI auto-replies, real-time notifications (Socket.IO), LLM APIs (OpenAI, Claude)
- **Security & auth:** JWT with refresh tokens, OTP, role-based access control, CSRF protection, prepared statements, audit logging, per-tenant data isolation
- **DevOps & production:** Linux, Docker, Nginx, GitHub Actions, shared and cloud hosting, subdomain/DNS and SSL setup, production debugging and performance tuning
- **Industrial & IoT:** Delta PLC (DVP-EC series, ladder logic in WPLSoft), Delta and Weintek HMIs (DOPSoft, EasyBuilder Pro), RS485, ESP32 gateways, remote telemetry
- **Workflow:** Git/GitHub branching and releases, Postman, PlantUML, documentation-first delivery (SRS, build specs)

WORK EXPERIENCE

Full Stack Web Developer — Speed Track, Makkah, Saudi Arabia (on-site)

Oct 2024 – Present

- Built and maintain WashTrack, the company's multi-tenant car wash SaaS platform in Laravel, with branch management, memberships, loyalty, coupons, campaigns and subscription billing.
- Designed RESTful APIs consumed by the web admin panel and the customer mobile app, plus real-time notification delivery across the platform.
- Integrated payments, WhatsApp messaging (Green API) with an AI auto-reply assistant, and LLM-powered personalisation in customer engagement flows.
- Programmed the Delta PLC and HMI for the Speed S3 automatic car wash machine and linked it to a cloud telemetry server for remote control and fault diagnosis.
- Built internal tools: DevTrack (task tracking with WhatsApp alerts) and operations dashboards such as water tanker consumption analysis.
- Profiled and optimised MySQL queries and backend logic, reducing response times on high-traffic dashboards.
- Handle deployment, domain/subdomain setup and production troubleshooting; work daily with a cross-functional international team in English.

Freelance Web Developer — Self-employed, Multan, Pakistan

Sep 2022 – Jun 2024 (part-time, alongside university)

- Delivered end-to-end projects for university faculty and small businesses, owning requirements, architecture, development and deployment.
- Built Laravel and Node.js applications with subscription management, OTP verification and secure payment gateway integrations.
- Developed REST APIs for React/JavaScript front ends; designed MySQL and MongoDB schemas for data-heavy applications.
- Ran a full SEO and performance audit for an e-commerce client (farmerbaskets.com).

Web Development Intern — Quantomex, Multan, Pakistan

Jun 2022 – Aug 2022

- Contributed to production SaaS modules in PHP and Node.js under senior developer mentorship.
- Built and integrated REST endpoints with front-end interfaces; optimised MySQL queries; took part in code reviews and Git workflows.

KEY PROJECTS

WashTrack — Car Wash SaaS Platform & Customer App (Speed Track)

Laravel, MySQL, REST APIs, payment gateway, WhatsApp/Green API, real-time notifications

- Multi-tenant SaaS with seven roles, branch management and a super-admin control plane above isolated tenants.
- Subscription billing layer with separate money flows for platform fees and customer wash packages.
- Generic campaign engine plus loyalty and coupon modules; composed pricing with entitlement snapshots so plan changes never alter past purchases.
- REST API layer serving the customer mobile app (memberships, packages, loyalty, notifications) and the branch admin panels.

Speed S3 — Automatic Car Wash Machine Control, PLC & HMI (Speed Track)

Delta DVP48EC PLC, WPLSoft ladder logic, Delta DOP-107DV HMI (DOPSoft), Weintek MT8071iE, ESP32-S3 RS485 gateway

- Rewrote the machine's PLC ladder program from scratch, with adjustable wash parameters.
- Built HMI screens showing live motion and machine status, with operator-adjustable settings.
- Connected the PLC over RS485 to an ESP32-S3 gateway that reports to a cloud telemetry server (plcs3.speedtrackauto.com) for remote control and remote sensor/fault diagnosis; configured Weintek EasyAccess 2.0 for secure remote HMI access.
- Prepared the machine's wiring and electrical diagram for SASO certification.

DevTrack — Internal Task & Development Tracking System

PHP 8, MySQL (prepared statements), Bootstrap 5, Chart.js, WhatsApp bot

- Cross-department task lifecycle (New, In Progress, Ready for Testing, Completed / On Hold) with attachments, search, filters and pagination.
- Role-based access (admin, manager, developer, user), CSRF protection, soft deletes and audit history; configurable WhatsApp alert triggers with a notification log.

Education Management Platform (EMP + LMS) — Multi-tenant SaaS

React, TypeScript, Node/Express, MongoDB, Redis, Socket.IO, Stripe, JazzCash/Easypaisa, Docker, Nginx, GitHub Actions

- Architected a seven-role platform (Super Admin, Org Admin, Teacher, Student, Parent, Finance, HR) with per-tenant branding, subdomains and data isolation.
- JWT with refresh tokens and RBAC; documented in PlantUML and an SRS before build, with a six-phase roadmap.

Other Work

- **WhatsApp AI support bot:** answers customer questions from the business manual via an LLM API, deployed on shared hosting.
- **ERP financial module:** Laravel 12 design with a mandatory double-entry ledger through a single LedgerService.
- **Pharmacy ERP/POS concept:** wholesale/retail dual mode with offline-first billing (Tauri + SQLite) and batch-level inventory.
- **AI/RAG projects:** AgentDesk (multi-agent support assistant, FastAPI, gRPC, LangGraph, Qdrant, PostgreSQL) and DocuRAG (hybrid search RAG pipeline with evaluation).
- **IoT:** ESP32/Arduino smart tracker; KhabarHub, a Laravel news platform with AI rewriting and social auto-posting.

EDUCATION

BSc Computer Science — Air University, Multan Campus, Pakistan · Graduated 2024 · CGPA 3.42 / 4.00

MPhil English Literature — in progress

ADDITIONAL

- Languages: English (professional working proficiency), Urdu (native).
- Based in Saudi Arabia with on-site Saudi work experience; available for full-time, in-person work in Riyadh.
